OECD BETTER LIFE INDEX

Redesigning multidimensional country comparison

An aligned heatmap makes ranking and comparison easier across 38 countries and 11 dimensions

ORIGINAL FLOWER CHART

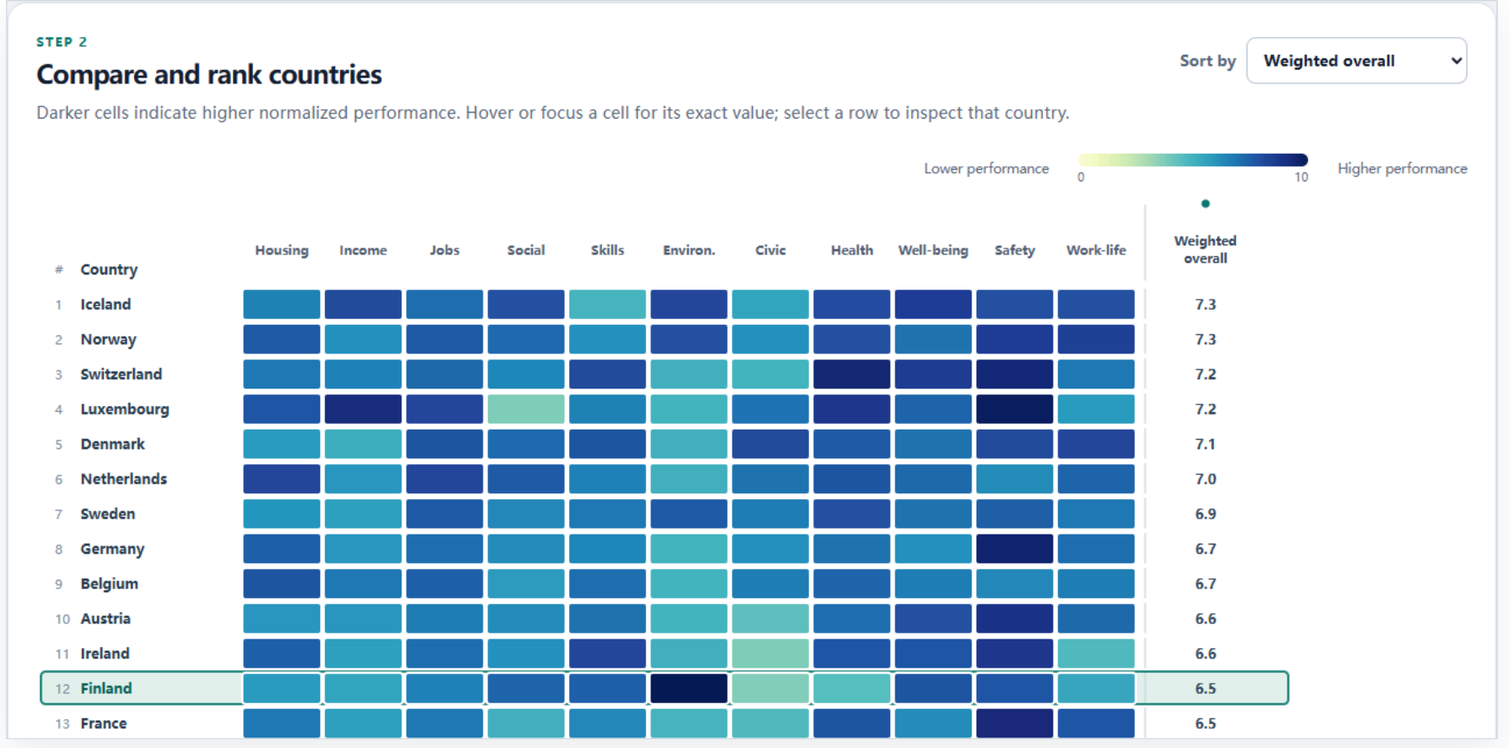

Why comparison is difficult

- Radial petals lack a shared baseline
- Petal size mixes performance with preference
- Finding the highest value requires scanning every glyph

change safety index

REDESIGN: SORTABLE HEATMAP

Performance remains visible in the cells. Priority sliders affect only the weighted overall score, while the detail plot uses one common 0–10 scale.
